

Lead & Copper Revised Rule (LCRR) & the CSCD

Background

The EPA is requiring all public water utilities to complete a lead service line inventory and submit it to state agencies by October 2024. This inventory will force utilities to investigate service line materials from the water main all the way to the foundation of the dwelling it serves.

Fact

All CSCD-owned service lines (from the main to the meter) are PLASTIC. The District will be focusing all efforts on identifying the customer-owned service lines (from the meter to the foundation of your home).

Working with Ziptility

CSCD has partnered with Ziptility to help manage this compliance project. Ziptility already provides GIS & work management software to the District and has been studying LCRR and its impacts to small utilities across the nation.

Ziptility Advantages:

- An LCRR Consultant available 24/7 that will guide the District through the different phases of the project and provide important resources and templates along the journey
- EPA-approved reporting
- An online customer self-identification survey
- An online public display map
- Easy to use software for our team in order to complete this as efficiently and timely as possible

What can you do to help?

The more help we can get from the community, the easier it will be for our team to complete the project! There are a few specific ways that you can help us:

- ★ If you already know your service line material either call the office (317) 933-2893 or email Josh Bryant at jbryant@cscd-in.org to provide the information.
- ★ When it comes time for the customer survey please follow the instructions to help you self-identify the service line coming into your home and return the survey.
